

Specialized tests

Because every sector has its own specific linguistic features, Bright Language employs tailored tests to ensure alignment with your business requirements.

We have worked with some of the biggest names in industry to develop sector-specific technical tests.

THE DEFENSE SECTOR

In partnership with the French Air Force, Bright Language has developed a test specifically designed to evaluate English proficiency in a defense environment.

This test reflects the importance of communication in English with NATO and with UN forces in real-life situations experienced by the armed forces in the field.

THE AVIATION SECTOR

Bright Language and Air France Industries have teamed up to develop Simplified Technical English assessment tests for the aerospace sector.

These tests enable technicians to carry out maintenance operations on aircraft structures in compliance with the quality and safety requirements set out in all manufacturers' and equipment manufacturers' manuals, thus meeting the EASA Part-66 and Part-145 requirements.

5 tests based on written comprehension assessment have been created: Aircraft, Engine, Components, Cabin and Structure

Specialized tests for different jobs

What is it?

Tests developed for specific sectors such as defense and aviation.

Ideal for:

Suitable for all organizations operating in a specific sector with a requirement to assess employees' language proficiency in a highly targeted field.

We guarantee:

- Rapid access to results
- Unbeatable prices for premium quality assessments accredited by many international organizations (NATO, the French Air Force, Air France Industries, Airbus, and Safran Group).
